

## CLAIMS

1. A regenerated resin composition comprising (I) a molded article pulverized material (Component A) that satisfies conditions
- (1) that the molded article pulverized material is a pulverized material of a molded article having an aromatic polycarbonate resin content of 30 to 98 % by weight,
- (2) that the pulverized material has a viscosity average molecular weight of 17,000 to 30,000, and
- (3) that the pulverized material has a wet heat retention ratio of at least 60 %, and
- (II) an aromatic polycarbonate resin (Component B).
2. The regenerated resin composition of claim 1, which has a pulverized material (Component A) content of 5 to 60 % by weight and an aromatic polycarbonate resin (Component B) content of 5 to 90 % by weight.
3. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) has a wet heat retention ratio of at least 70 %.
4. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains a styrene-based resin (Component A-2-PS) or an aromatic polyester resin (Component A-2-PE).
5. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 1 to 65 % by weight of Component A-2-PS or Component A-2-PE.

6. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains a flame retardant (Component A-3).
- 5 7. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 1 to 30 % by weight of a phosphoric ester (Component A-3-a) as a flame retardant.
- 10 8. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 0.01 to 10 % by weight of an organosiloxane compound (Component A-3-b) as a flame retardant.
- 15 9. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 0.0005 to 1 % by weight of an alkali (alkaline earth) metal salt (Component A-3-c) as a flame retardant.
- 20 10. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 0.5 to 20 % by weight of an impact modifier (Component A-4).
- 25 11. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) contains 1 to 60 % by weight of a reinforcing filler (Component A-5).
- 30 12. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) has an aromatic polycarbonate resin (Component A-1) content of 40 to 90 % by weight.

09970556 110601

13. The regenerated resin composition of claim 1, wherein the pulverized material (Component A) has a viscosity average molecular weight of 18,000 to 26,000.

5 14. The regenerated resin composition of claim 1, which has a pulverized material (Component A) content of 6 to 50 % by weight and an aromatic polycarbonate resin (Component B) content of 10 to 85 % by weight.

10 15. The regenerated resin composition of claim 1, which is a regenerated resin composition composed of the pulverized material (Component A) and the aromatic polycarbonate resin (Component B), wherein the regenerated resin composition (Component C) is a  
15 composition that contains

(1) 30 to 96 % by weight of an aromatic polycarbonate resin (Component C-1),

(2) 3 to 40 % by weight of a styrene-based resin (Component C-2-PS), and

20 (3) 0.01 to 30 % by weight of a flame retardant (Component C-3).

16. The regenerated resin composition of claim 15, which further contains 0.5 to 20 % by weight of an impact  
25 modifier (Component C-4).

17. The regenerated resin composition of claim 15 or 16, which further contains 1 to 60 % by weight of a reinforcing filler (Component C-5).

30

18. The regenerated resin composition of claim 15, which contains, as the flame retardant (Component C-3), 1 to 30 % by weight of a phosphoric ester (Component C-3-a).

19. The regenerated resin composition of claim 15, which gives a molded article having a wet heat retention ratio of at least 60 %.

5 20. The regenerated resin composition of claim 15, which gives a molded article having an impact value retention ratio of at least 60 %.

21. The regenerated resin composition of claim 15, which  
10 gives a molded article that satisfies V-0 in a flame retardancy test according to UL-94.

22. The regenerated resin composition of claim 1, which  
15 is a regenerated resin composition composed of the pulverized material (Component A) and the aromatic polycarbonate resin (Component B), wherein the regenerated resin composition (Component C) is a composition that contains

- 20 (1) 30 to 96 % by weight of an aromatic polycarbonate resin (Component C-1),  
(2) 3 to 40 % by weight of an aromatic polyester resin (Component C-2-PE), and  
(3) 0.01 to 30 % by weight of a flame retardant (Component C-3).

25

23. The regenerated resin composition of claim 22, which further contains 0.5 to 20 % by weight of an impact modifier (Component C-4).

30 24. The regenerated resin composition of claim 22 or 23, which further contains 1 to 60 % by weight of a reinforcing filler (Component C-5).

25. The regenerated resin composition of claim 22, which

gives a molded article having a wet heat retention ratio of at least 60 %.

26. The regenerated resin composition of claim 22, which  
5 gives a molded article having an impact value retention ratio of at least 60 %.

27. The regenerated resin composition of claim 22, which  
gives a molded article that satisfies V-0 in a flame  
10 retardancy test according to UL-94.

28. The regenerated resin composition of claim 1, which  
is a regenerated resin composition composed of the  
pulverized material (Component A) and the aromatic  
15 polycarbonate resin (Component B), wherein the  
regenerated resin composition (Component C) is a  
composition which contains  
(1) 50 to 98 % by weight of an aromatic polycarbonate  
resin (Component C-1),  
20 (2) 0.01 to 30 % by weight of a flame retardant  
(Component C-3), and  
(3) 0 to 20 % by weight of an impact modifier (Component  
C-4).

25 29. The regenerated resin composition of claim 28, which  
further contains 1 to 30 % by weight of a reinforcing  
filler (Component C-5).

30 30. The regenerated resin composition of claim 28, which  
contains, as the flame retardant (Component C-3), 1 to  
30 % by weight of a phosphoric ester (Component C-3-a).

31. The regenerated resin composition of claim 28, which  
gives a molded article having a wet heat retention ratio

00975551 43604  
F0927 555/660

of at least 60 %.

32. The regenerated resin composition of claim 28, which gives a molded article having an impact value retention  
5 ratio of at least 60 %.

33. The regenerated resin composition of claim 28, which gives a molded article that satisfies V-0 in a flame retardancy test according to UL-94.

10

34. A molded article formed of the regenerated resin composition recited in any one of claims 1, 15, 22 or 28.

35. The molded article of claim 34, which has a wet heat  
15 retention ratio of at least 60 %.
